

Press release October 18, 2021

Ovzon receives 1.92 MUSD order from U.S. DoD

Ovzon has received a direct award from the U.S. DoD to provide 50 of the new, ultra-small, Ovzon T6 mobile satellite terminals. The order is valued at 1.92 MUSD and represents the largest single order to date for the new Ovzon T6.

The U.S. DoD recently placed an order for 50 Ovzon T6 mobile satellite terminals based on its ultra-small form factor, light weight, ease of use, and industry leading performance. The Ovzon T6 offers unmatched mobility and performance in any environment, and replaces much larger, heavier, and less capable systems that unnecessarily burden logistics systems and resources.

Ovzon T6s industry leading capabilities make it ideal for supporting operational teams while being fully capable of providing the bandwidth to scale into a robust headquarters on one single terminal, eliminating the need for follow-on systems and additional crew. Weighing less than 13 pounds, the Ovzon T6 can be placed into operation within less than a minute and an untrained user can operate it for hours on a common external battery.

"This significant order represents an enterprise-level investment in the Ovzon Satcom-as-a-Service by a customer with a very demanding and important mission. We are humbled to play an increasingly important role with this key customer. The significance of this order is not lost on us, and it reinforces our commitment to provide products and services with unmatched performance, resiliency and customer service and support", says Per Norén, CEO of Ovzon.
